Professional Summary

Azure Data Engineer with hands-on experience designing and building scalable ELT and ETL pipelines on cloud-native Azure infrastructure using Azure Data Factory, Databricks (PySpark), Snowflake, and Microsoft Fabric. Specialized in data lakehouse architecture (Medallion), Change Data Capture, data quality enforcement, and batch and streaming pipelines that power analytics platforms and Power BI dashboards. Committed to data governance best practices across Silver and Gold data layers.

Education

Master of Computer Applications (MCA) **2023 – 2025**
MIT World Peace University, Pune

Technical Skills

- **Programming & Querying:** Python, Pandas, SQL, PySpark, SparkSQL
- **Data Engineering & Cloud:** Azure Databricks (Unity Catalog), Azure Data Lake Storage (ADLS Gen2), Snowflake, Microsoft Fabric, Azure Data Factory, Azure Functions, Azure Event Hubs, Azure SQL, Power BI
- **Architectures & Concepts:** Medallion Architecture, Change Data Capture, ELT/ETL, Data Lakehouse, Batch and Streaming Pipelines, Data Modeling, Star Schema, Data Quality, Data Governance, Schema Evolution
- **DevOps & Tools:** Azure DevOps, CI/CD Pipelines, Git, GitHub, Azure Monitor, SSMS, DBeaver, Microsoft Excel

Experience

Bizmetric |*Associate Software Engineer (Data Engineer)* **Jan 2025 – Present**

- Owned Azure-based ETL pipelines using Azure Data Factory, Azure Databricks (PySpark, Spark SQL), Microsoft Fabric, and SQL, implementing Medallion architecture across **10+ production pipelines** processing millions of records daily. Contributed to a **metadata-driven ETL architecture** by developing reusable Python, PySpark, and SQL components and parameterized ADF pipelines for dynamic data ingestion and transformation.
- Built Azure Functions–based CI/CD orchestration for automated pipeline scheduling and monitoring via Azure Monitor, reducing manual intervention by 50 percent and improving pipeline reliability by 40 percent.
- Optimized Spark transformations and SQL queries across Azure SQL and PostgreSQL, **improving average job runtimes by 35%** through query tuning, partition optimization, and efficient data processing patterns.
- Managed Delta Lake tables in Azure Databricks with schema evolution, ACID transactions, and data governance controls across curated Silver and Gold layers, enabling trusted datasets for analytics and reporting.
- Developed metadata-driven ADF workflows using Metadata, Lookup, and ForEach activities to automate source-to-target processing and support dynamic dataset onboarding while enforcing data quality checks and SLA-aligned delivery across pipeline stages,lowering processing time and infrastructure costs by 25 percent.

WebWeaver | *Software Developer Intern* **Oct 2024 – Dec 2024**

KWMCS Ventures | *IT Intern* **Jan 2024 – Jul 2024**

Certifications

- *Databricks Certified Data Engineer Professional*
- *Snowflake SnowPro Core*
- *Microsoft Certified: Fabric Data Engineer Associate (DP-700)*

Projects

Financial Data Analysis & Banking Insights | *ADF, PySpark, SparkSQL, Delta Lake, Azure SQL*
Built an end-to-end **ELT pipeline** using ADF and PySpark with incremental loading, dynamic file detection, and **data quality** checks across **10M+ banking records**; developed PySpark transformations for validation, cleansing, and aggregations to surface transaction trends and financial risk insights across **Delta Lake** layers with **data lineage** tracking.

Achievements

- **NCC B & C Certificates** (leadership & discipline) | **1st Place, Coders Hunt** — MIT-WPU 2023 (competitive programming)
